

Autotrack Service Onsite System Acceptance Test (SAT)

Autotrack System Acceptance Test for On Demand software is more about platforms, operating system, web browser, server, networking, antivirus reaction, firewall reaction and all other computer network involving in the implementation of

Autotrack On Demand. A fully tested networking environment will be required for most of the corporate customer whereby their IT administrator will only allow the proper designed software to be installed into their networking environment. Software which is involve operation of data in and out activity is critical for corporate company because it bring the company to the risk for their networking infrastructure. Server and multi user Autotrack on demand bring more risk for the organization to the external attack to their network infrastructure. Anyway, the lite setup for Autotrack On Demand may note required this service where by customer just install their software at the independence computer work station and isolated from the corporate networking.
