

Easy Transaction Authorization At The Retail Register

IntelliPIN™

LEADER IN ADVANCED CARD SOLUTIONS

MAGTEK

MORE WAYS FOR CUSTOMERS TO PAY

PIN-PLUS ABILITY

With IntelliPIN from Mag-Tek, your customers get the satisfaction of more ways to pay. IntelliPIN brings secure debit and credit payment to the PC-based retail register. Customers simply swipe their card and enter their PIN. The unit's PINpad securely encrypts the PIN for transmission to the transaction processor for PIN verification.

By connecting IntelliPIN to Mag-Tek's MICR PLUS, you can add check reading capability and only use one serial port.

SECURE AND UPGRADABLE

Secure and tamperproof, IntelliPIN protects PIN encryption keys physically and logically per ANSI 9.8. Encryption keys are managed using either master-session or DUKPT.

With a simple dock change, and no change to the PINpad, you can upgrade IntelliPIN for smart card reading and writing. IntelliPIN's flash memory makes upgrading easy.

AT YOUR COMMAND

IntelliPIN is entirely at your command for on-line customer interaction. Using PC-based software, you can communicate with customers on IntelliPIN's two-line LCD, asking questions or displaying advertising messages. Customers can respond using IntelliPIN's soft and numeric keys.

RETAIL READY

IntelliPIN is retail ready – durable, easy to use, and convenient. Graphics guide the swiping of the card. PINpad keys are sized and spaced for easy entry. Braille code is used on the 5 key for touch identity. Demographic information from magnetic stripe driver's licenses can be captured for immediate transfer to the host database. Small and stylized, IntelliPIN conserves premium space at the POS.

SPECIFICATIONS

- 3-track magnetic stripe reader: reads ISO-standard magnetic stripe cards and AAMVA driver's licenses
- Choice of interfaces: RS-232 or PC keyboard wedge
- In-dock dimensions: 6.9" deep; 4" wide; 3.5" high
