AGen *version 1.0*

AGen software is an Android program generator to help to shorten the time of a programmer or project implementer to develop the android application on their Android base device (Mobile phone or tablet) with objective to collect data via user input, barcode scanner or photo capturing. With this easy-to-use application, user do not need any programming skill in order to develop their Android application.

Shorten the time for Android application development

User or project implementer no longer required long software development time. The whole project can be shortened by more than half.

Auto data posting back to server or host after captured.

The developed applicated directly connected to the server, user application will directly post back to the server while application in running at the mobile device.

Easy configurable and amend the data capture step.

If you are not happy with the process flow, just change the process flow at the server and re-sync with the mobile application. The newly amended application is ready in your mobile.

Drag and drop function on the server to generate the Android apk.

Application (Bullet) development is simple, the developer just needs to drag and drop and function assign. Then you can run the application now on your Android mobile device.

No more paper base data capturing

With the help of AGen, now all is digitalised and the data is automatically collected at the centre database and able to be share among all the related personal on time.

On-Premise License.

AGen server requires a minimum windows server 2016 or above or windows 10 or above if you would like to use the On-Premise license.
