

AGen AI Vision

The Visual Object: Identify Anything, Anywhere Without a Barcode.

Transform standard cameras into instant, AI-powered identification scanners.

Beyond the Traditional Barcode

Traditional barcodes peel, get damaged, or require manual label application to every item. **AGen AI Vision** turns any standard camera into an intelligent scanner that recognizes products, parts, and inventory instantly by their physical appearance.

Advantage

Zero Labeling Costs: Skip printing and sticking physical barcoded stickers.

Instant ID Output: Generates item IDs, SKU numbers, or metadata in real-time.

Camera Agnostic: Runs using existing mobile device cameras, or USB webcams.

USE CASES

Built for Dynamic Industries

- **Retail & Supermarkets:** Auto-identify unlabeled fresh produce at self-checkout stations without requiring barcode stickers.
- **Warehousing & Logistics:** Scan incoming boxes or parts directly on conveyor belts without needing line-of-sight to a printed sticker.
- **Manufacturing QA:** Track assemblies and verify component placement automatically as items pass down the production line.
- **Asset Tracking:** Identify tools, equipment, or machinery parts instantly on construction or field sites.

Feature

Feature	How It Works	Business Value
Visual Tagging	Extracts physical attributes (shape, color, markings) to generate a unique Object ID.	Eliminates manual data entry errors.
Sub-Second Speed	Identifies items within seconds.	Speeds up checkout and processing lines.
Multi-Object Scan	Detects and tags multiple objects simultaneously in a single frame.	Accelerates bulk inventory audits.
System Integration	Sends output directly via API/Webhook to ERP, POS, or WMS databases.	Integrates seamlessly into existing workflows.

Ready to Automate Your Identification Workflow?

Upgrade your operations with instant, label-free AI identification.
