

AGen Tracking

## RFID Trolley Monitoring System

*“Real-time visibility. Smarter logistics.”*

***Ultra High Frequency (UHF) RFID technology enables real-time tracking of trolleys in factory environments, enhancing operational visibility and efficiency. By embedding RFID tags on trolleys and installing fixed readers along key checkpoints, factories can automatically monitor trolley movement without manual intervention. This system improves inventory accuracy, reduces human error, and supports data-driven decision-making in logistics and production workflows.***

### USE CASES

- Automotive assembly lines
- Electronics manufacturing
- Warehouse logistics
- Healthcare wheelchair tracking
- Hotel and resort trolley tracking
- Residential complex

### Features & Benefits

- Live location tracking
- Automated inventory updates
- Reduced human error
- Analytics dashboard
- Trolley movement frequency
- Trolley maintenance
