

Raw Material Tracking with QR Code

Prevent inventory defects and missing part using AGen (QRCode tracking System)

We assist you to assign QRCode to each component or raw materials in order to track components originating, supplier and batches.

Raw material receiving and recording is always a messy process if you do not have any correct operating procedures and recording tools to assist you.

Receiving does not match the purchase or recording information not able to be reused easily by the end of the process is always the big challenge for most of the organization.

By using AGen raw materials receiving software, we can help you to improve the flow of this process. Key in supplier Delivery Order Number, enter raw materials part number, record down the batch number and the quantity of the raw materials by using your mobile device. You could speed up the process even faster if your raw materials were already labeled nicely with barcode as part number and batch number.

After collecting this information, the information will be posted automatically to the server from AGen mobile device. The store supervisor will just need to browse the receiving information directly from the AGen server. For the case where store receiver able to spot the supplier sending in wrong product or problem raw materials, the store receiver just needs to take a snapshot of the photo then the photo will be display automatically on the server as proof to notify store supervisor.
