

## Autotrack Enterprise Asset Tracking

Autotrack Enterprise Asset Tracking solution is specific design for the customer who required customization of the software to suite their tracking process flow rather than user suite to software process flow. Our process flow engineer will work out together with the customer on their process flow of tracking solution, fine tuning and simplify the tracking and then work out the fully suitable software for the customer process flow.

The level of customization for individual module must be agree between customer and Autotrack team before any customization process, any additional customization after the specification agree and documented need to be rearrange between Autotrack team and the customer.

### Available Module
