Autotrack Enterprise On demand

Managing
tens of millions
of shipments
a day
worldwide,
with eyes closed.

Introduction

Autotrack inventory control system develop by using web base and windows form technology. Hybrid development allow the inventory data to be updated online and without losing the user interaction performance. Instant alert for supervisor for critical stock level ordering to prevent out of stock at retail outlet.

Autotrack is being design to interface seamlessly with most of the exiting market ERP solution or accounting solution via approved direct database link. Thank for Autotrack Datacomm software, it flexible design to be an interface bridge in between Autotrack software and exiting market accounting or ERP solution.

From inventory control, shipping and receiving, to order fulfilment, Autotrack Warehouse Management System (Autotrack WMS) is vital to improving the efficiency of a company's warehouse operations. Autotrack offers warehouse management software packages that can be customized to fit the needs of companies of any size. By combining a warehouse management system with a wireless network, mobile computers, radio frequency identification (RFID) technology, and voice picking applications, Barcoding can help fully extend your enterprise to the mobile worker, while increasing operational efficiencies and enhancing your customer service.

A comprehensive warehouse management system helps streamline multiple functions of your enterprise:

Receiving (GRN) – Gain insights into shipments that have been delivered, but that are not yet at their final location. Make sure items at low stock levels are staged and put away first, reducing the impact of out-of-stocks and inefficient fulfilment processes.

Put-Away – Know the location of all inventory on your shelves. Route your workers to the right location, set up their picks in the proper order to minimize travel time, and increase the number of orders they can pick each day.

Picking – Improve error-proofing and productivity in the picking process. Workers receive their picks on a mobile device that routes them to the proper location. Scanning items when you pick them verifies that the right item at the right quantity is picked.

Packing – Ensure the accuracy of each order that is picked and reduce material costs by determining the right sized shipping carton.

Autotrack Enterprise On demand

Shipping – See that each order is properly packaged and shipped to the right destination and delivered on the right date.

Autotrack enterprise is custom made base on your requirement for your warehouse, please include in the Autotrack On Demand module for the module you required for your daily operation, ALC will provide the complete consultation and implementation for your warehouse inventory control.
