## Introduction

✕ - - - - - ✕

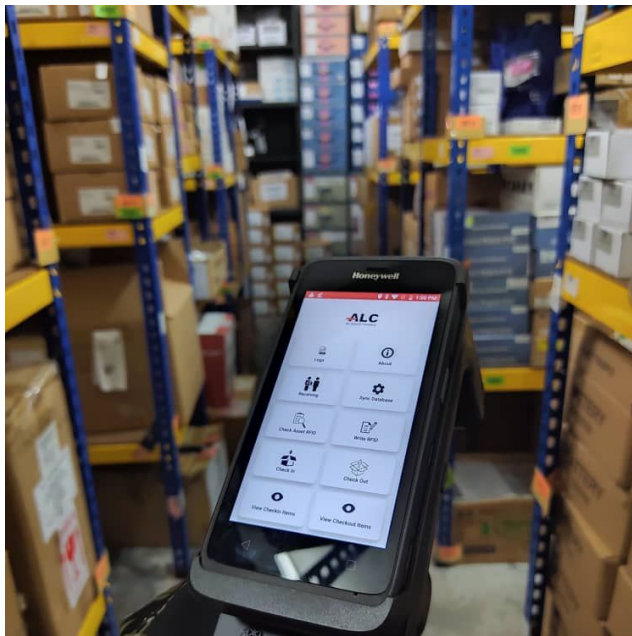

In a service organization, tools are the most valuable asset after humans. As we all know, if you want to complete a task easily, you must have proper and functional tools to help you on this. In today's organisation, especially organisations with more than 10 staff, sharing a common tool, device or machine is common but organising the tool is not as simple as using tools. The sharing tool becomes more complicated if the tool itself is portable and comes with a battery pack or consumable. Many of the staff would like to use the tool but do not care about the condition of the tool.

“

We need to make sure all the tools after use are properly kept and maintained, after implementing the Autotrack Enterprise Tool Tracking, the tool conditional improved compared previously.

-Rahaizan Mansur

”

## SCAN WHEN YOU PICK.

- - - - X

Just one scan on the tool barcode or RFID tag, now your loans and return record is directly updated to the system. All the updated records can be viewed by the organization worker by just login to the system. It simplifies the recording of loan and return activity..
