

F7 Finger Print system from AMC.

F7 is one of a wide used access controller in the office; choose a lot of stable import original parts. Strictly follow the internal security protection product standard, strictly ageing test before they leave factory. F7 is suitable for the important entrances and exits in an office or a big company. The biggest advantage of F7 is easy to install, with good function with affordable price.

Basic version

F7 basic version is a standalone can work without connecting with computer. Support access control function (the door can be open in different time, by many people; will give alarm when someone destroying it or wrong close/open the door; press button to input and open the door, can give the alarm output).

Standard version

Support TCP/IP or RS485/RS232 communication. It can work either standalone or connected with PC. It can store 30000 records when standalone. Support access control function (different time zone, multi-user, it will give alarm when someone is destroying it or wrong close/open the door, the door is opened under a wrong operation, press the buttons to get in, with doorbell interface, can give alarms one by one, can send the alarm message when threatened by hijackers and so on) it also has the T & A function. Can work together with access control software and T & A software.

Technical Specification

- Template 500
- Transaction capacity 30000
- Identification 1:1 or 1:N
- Password access
- Electronic lock control: 3A/12VDC relay output
- Communication protocol: TCP/IP on standard version
- Keyboard and display: integrate 80 characters and LCD display and digital keypad
- Power: 12 V DC, waiting current: 50mA, working current: 400 mA
- Identification speed: <=2 seconds
- FRR: <=1%
- FAR: <=0.0001%
- Temperature operating: 0°C - 45°C
- Humidity operating: 20%-80%
- Language: English
- Size: 180*82*55
