MT-95 *Encoder*

LEADER N ADVANCED CARD SOLUT ONS

MAGTEK

Mag-Tek's User Friendly MT-95 Supports Online and Offline Card Encoding.

The MT-95 magnetic stripe encoder/reader works by itself in a standalone mode, or interfaces with IBM PCs and compatibles. This encoder writes, reads, verifies and modifies magnetic stripe cards. All fixed or constant data can be programmed, thereby requiring only variable data to be entered by the operator, which minimizes key entry. The MT-95 allows the user to encode any combination of up to three tracks simultaneously.

When in online mode, audit lists can be printed easily. Security is ensured through operator passwords and internal software counters. The software counter is encrypted and can only be viewed via an audit trail.

...Encodes credit cards, debit cards, and I.D. Cards

The MT-95 supports both Hi-Co and Lo-Co encoding in one unit, and reads all cards encoded in ISO and American Automotive Vehicle Association (AAMVA) formats.

...Instant card usage

New or existing cards can be encoded and verified in a matter of seconds. Your cardholders will have access to your system immediately. No more waiting for cards to be processed and mailed by an outside service bureau.

...Maximum Security

Online access to your MT-95 can be controlled by personnel with authorized passwords. Internal software counters keep track of the number of cards processed. The number is encrypted, thereby making it nearly impossible to tamper with the counter. Audit lists can be generated for additional control.

...Easy to operate

In the standalone mode, title fields prompt the operator. All repetitive data can be pre-programmed to minimize data entry. Display screens instruct the operator on the sequence of reading and encoding. As a result, the time spent issuing cards and the potential for encoding errors are both greatly reduced.

...Data base file management

When the MT-95 is connected to a PC, you can easily build and maintain complete card issuance data, and generate an audit report upon demand with the MT-95 software included with each encoder.

For more information on the MT-95 encoder, contact your Mag-Tek Representative or call Mag-Tek directly at 1-800-788-6835.
