TERMINAL EMULATION AND WEB BASED DATA COLLECTION

## SMART CLIENTS FOR WINDOWS CE & POCKET PC DEVICES

3270 | 5250 | VT220 | HTML (Web)

Access business critical and legacy applications running on IBM 3270, AS/400 5250, VT hosts or Web servers, from any Windows CE / Pocket PC terminal over any wired or wireless IP network.

Smart Client applications from Naurtech offer terminal emulation and ADC Browser, all in one single package These are optimized for data collection solutions and "device tailored" for respective hardware vendor terminals to deliver a superior solution for our customers and partners.

Solution Customization			
Config	User Interface	Lock Down	HTML / Java Script API

Smart Client Engines			
3270	5250	VT220	ADC Browser

Any Hardware Device Vendor			
Intermec	Symbol	HHP	Other

Any Peripheral			
Barcode	MSR	RFID	Printer

FEATURE HIGHLIGHTS

Full support of 3270, 5250 and VT220 terminal emulation

Integrated ADC Browser sessions for access to web based applications

Simultaneous multiple host sessions

Security: SSL (Secure Sockets Layer)

Western European code pages and support for multi-byte character set languages (Chinese, Japanese, Korean, Hebrew…)

Custom hardware key remapping

Configurable software keypad

Device Operating System lock out

Macros & Automatic login

Full screen readability with Context Menus

Integrated support for barcode scanner controls

Serial, IrDA, Bluetooth and Network printing

Automatic install and session configuration during device cold boot

HotSpots: Leverages the graphical "touch screen" for optimized application interaction

No intermediate middleware / gateway required. Client connects directly to host

BENEFITS

Our smart clients serve as a "middleware" to make your application / business logic accessible, from any hardware vendor terminal, giving you consistent configuration and usability for your solution.

By standardizing on our smart clients to access your bussiness logic applications, you can focus on your core competency.

ADC Browser allows full control of device peripherals programatically, independent of hardware terminal vendor.

Seamless migration from text based legacy TE to new GUI rich web based applications.

Fully support proprietary TE extensions browser META tags from vendors like Intermec, Symbol and LXE.

Free evaluation copies are available for download from our website.
