

PULS

PULS is Point Mobile's lifetime solution, which extends the life cycle of Android-based Point Mobile enterprise devices **up to seven years after product launch**. Security patches, updates and upgrades to newer Android versions¹ are provided during the entire lifetime of a device, which ensures your data is protected and you will benefit from using all the latest features the newest Android operating system is offering.

While the life cycle of a customer smartphone usually ends only two years after the initial market launch, Point Mobile devices guarantee **a long lifetime and continuous service supply**.

PATCHES, UPDATES & LIFETIME SUPPORT

Update your devices „Over the Air“

Our built-in FOTA (Firmware Over the Air) application makes installing updates easy, reliable and fast². Connect your device to a cellular network or a WiFi near you and check for the latest security updates or upgrade to the latest Android version with a single touch. There is no need to collect the devices from the field and update all of them manually. There will be no downtime and resources are saved as users can perform the installation on their own. All data remains safe on the device while the update only affects what requires fixing.

For more information about PULS and other Business Solutions offered by Point Mobile, please visit www.pointmobile.co.kr or contact your regional sales representative.
