AG Weighing Machine Integration with AGen Data Capturing solution

Introduction

AGen program generator design with the objective of capture data, storing data and delivery data in various format and requirement. One of the common industry data capturing requirement is weighing scale data capturing together with event identity and datetime. AGen team understand this requirement and we finally manage to integrate weighing scale into our AGen software.
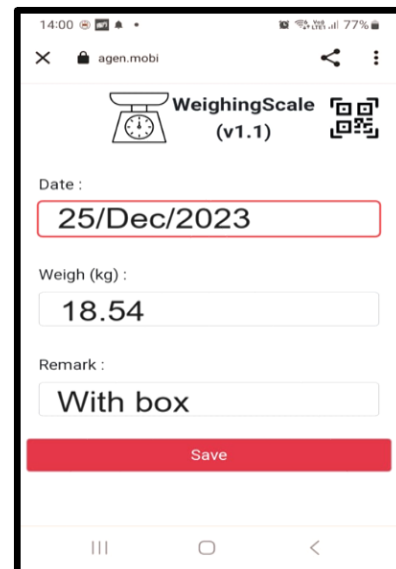

How it can be done?

With the AGen software, the technician (architect) will just drag and drop the weighing scale control to the application (Bullet) he designs for the weigh capturing application. At the same time, he can also capture the barcode information, photo information, RFID information of the weighing item.

What next it can be done?

Weighing item and print sticker.
Weighing item and photo capturing.
Weighing item and read barcode.
Weighing item display on big TV display.
Weighing item and send WhatsApp.
Weighing item and produce report.

Why should you use AGen?

Easy drag and drop solution.
Flexible and customisable by end user.
Support multiple users with individual display.
Server base application.
User customisable reporting.
