The Problem

Organization often struggles with:

Misplaced or delayed trolleys
Lost trolleys
Delays in Service for transferring item
Manual tracking errors
Inefficient inventory flow
Lack of real-time visibility
Obstruction Hazards.
Regulatory Violations
Poor User Experience
Negative Brand Perception
These issues lead to delays, increased costs, and reduced efficiency.

USE CASES

Automotive assembly lines
Electronics manufacturing
Warehouse logistics
Healthcare wheelchair tracking
Hotel and resort trolley tracking
Residential complex

Introducing AGen Tracking

RFID Trolley Monitoring System is an RFID-based trolley tracking system designed for industrial environments. It enables:

Real-time location tracking of trolleys

Automated data capture using RFID tags and readers

Gain full control over your shop floor logistics with minimal human intervention.

Features & Benefits

Live location tracking

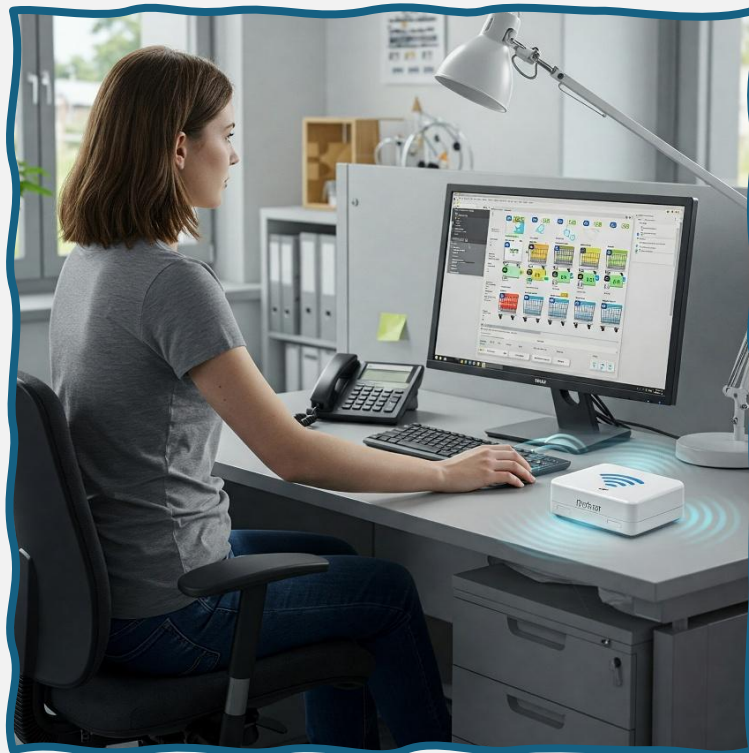

Automated inventory updates

Reduced human error

Analytics dashboard

Trolley movement frequency

Trolley maintenance
