

ALC Door Access control solution

As one of the main auto-ID solution provider in Malaysia and Singapore, ALC group always holding to one principle when trying to provide data capturing and generating solution for our client. We hold on the concept 1 people 1 identity to simplify the data capturing process. We try to designed to work together seamlessly, Access Systems', time recorder system and ID card printing system for our client in order to use only products provide you with the technology you need to deliver sophisticated security solutions—from the simplest to the most challenging.

Human identity today can carry either via the simple ID card with barcode, Magnetic card with swiping, RFID card with touching or item-less with biometric identity capturing. ID card is not only carry the user authorization for access control, it also serves the purpose to present and communication in between human. Since the popular usage of name tag for organization, ID card access control start to popular with barcode type of ID card serving the market since year 1980, most of the company would using this card due to it cost effectiveness and easy to produce. Magnetic card starts to popular after the introduction of magnetic tape by Japanese and start to replace the barcode card due to it higher security compare with barcode card. RFID start to penetrate the market after invention of distant transmission of passive chip which use to embedded into card. And today after the improvement of processor speed, biometric become the most popular ID capturing technology in the access control arena.
